

Date: 09/16/1998

Project Codename: FORMULA 5

Oversight Director: Benjamin Blanton

Coordinating Director: Gregory Morrison

Analysis Team Leader: Jonathan Lyle

Sub-Team Leader: Melissa Anders (removed from project)

*Chemical Components/Formula:* [REDACTED]

*Inert Storage Procedures:* 23.27 liters of chemical retained at a constant 41°F (278.15K), stored in corrugated polyhedral container composed of Plexiglas. Kept inert by intermixing with [REDACTED]; mix retained by perpetual rotation of container along a vertical axis.

*Personal Information on Subject:* (cf. PATIENT MENTAL AND PHYSICAL HEALTH INFORMATION page)

*Experimental Procedure:* subject was restrained inside sealed Plexiglas container approximately 7" x 3" x 1.5" with entry tube extending from mid-section of container upward to holding container of chemical (FORMULA 5). Subject fitted with wireless facial [REDACTED] monitoring [REDACTED]. Patient administered 10mg [REDACTED] in order to elevate heart rate. FORMULA 5 then pumped into container, minus 10 grams held on reserve for future study. Air pressure decreased inside sealed container so as to further instigate effective catalyzing of chemical agents.

*Results:*

*Immediate Reaction:* subject expressed indications of extreme [REDACTED] as tissues were broken down and merged with chemical agent. Within three minutes of exposure to chemical agent, brain functions seemingly ceased as electrodes were dissolved as well. Initial conclusion was [REDACTED], as only a black liquid was left in container. However, one hour three minutes after procedure, motion was detected, and then different colors became luminescent. Liquid took on rigidity over the following four days before it assumed a humanoid shape. After six days sealed in container, the subject recovered its [REDACTED] and was sedated, then relocated to a specially built airtight chamber for further study and observation.

*Survival:* Yes

*Developments/Enhanced Capacities:* Subject appears capable of reforming all physical characteristics, including basic shape and color. Subject also verified as capable of absorbing all forms of matter (organic and inorganic) and assimilating it into itself as raw matter. Subject uses this to positively augment its physical size, or else by decreasing density.

*Side Effects:* Subject appears to possess complete amnesia, and the [REDACTED] of its [REDACTED] form – [REDACTED] – is claimed by the subject to be instinctual. Mental status beyond amnesia impossible to determine as attending psychiatrist removed from project. Dr. Blanton has suggested bringing her back into active status re. FORMULA 5.

*Current Status:* [REDACTED]. Study no longer possible.

*Proper Containment of Subject (methodology):* [REDACTED]. Protested by Dale Anders, security counsel.

*Proper Containment of Subject (orthodoxy):* N/A
